October 2008

ArcelorMittal

Magnetism : a simple question of atoms !

➡ Physical properties will be different
(nothing to do with corrosion resistance)

The same difference between

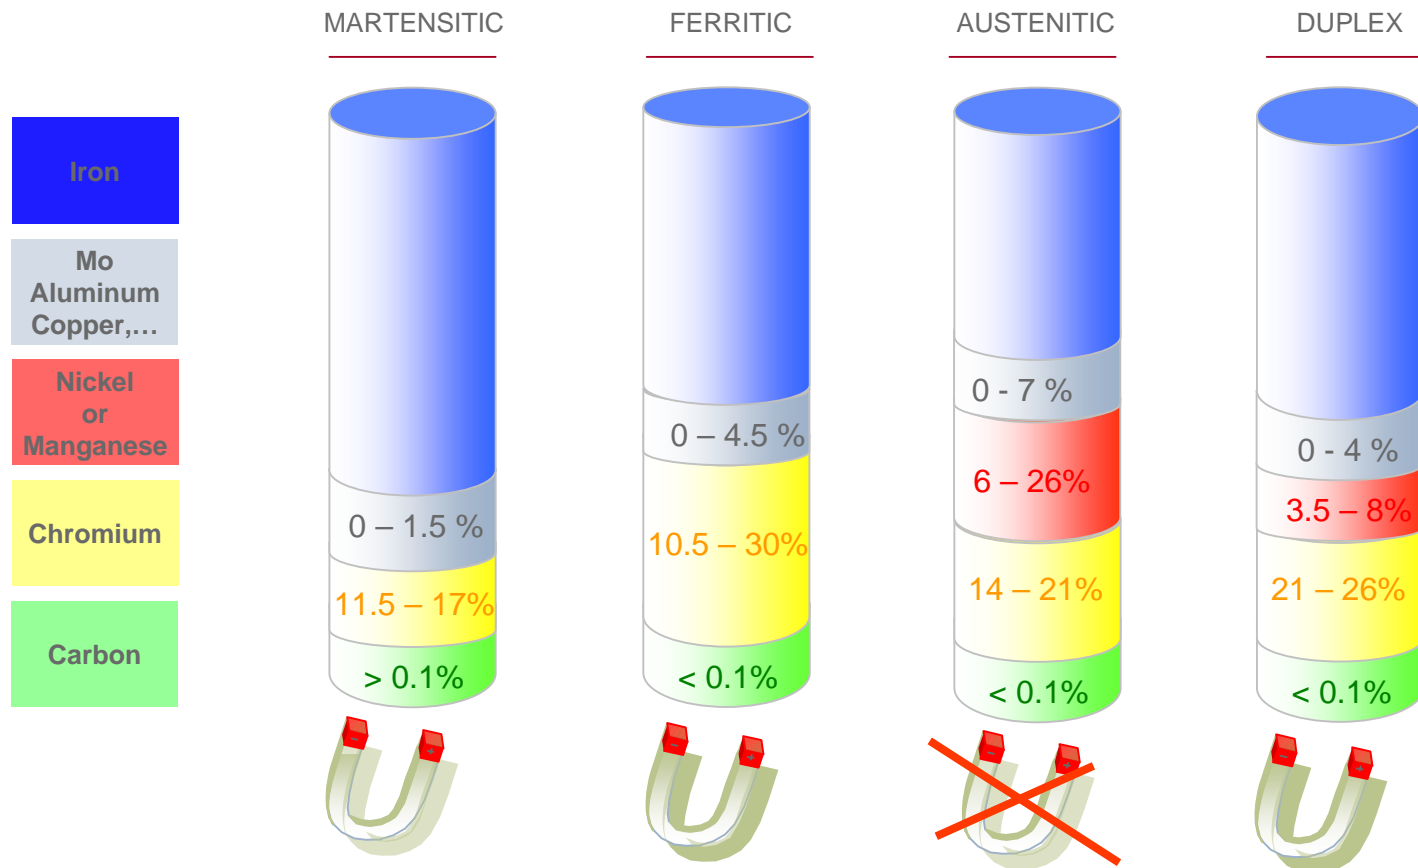

and

with carbon atoms

All stainless steels are magnetic, except Austenitics...

Magnetism = nothing to do with corrosion resistance

A proof : super duplex stainless steels used for chemical and offshore applications

But even Austenitics could be magnetic...

It is possible for the magnetic permeability of austenitic steels to be changed during processing. For example, cold work and welding are liable to increase the amount of martensite and ferrite respectively in the steel.

A familiar example is in a stainless steel **sink** where the flat drainer has little magnetic response whereas the pressed bowl has a higher response due to the formation of martensite particularly in the corners.

Be innovative, use magnetic properties

An opportunity to create
new products !!!

Temporary fixation...

ArcelorMittal

Induction

Traditional and well known application....induction **cooking**

Ex : Bourgeat

Or **cooling**....

Other application : Blanco

Docking bay with induction
technology for food regeneration

Open and close...

A simple and economic way to open or close **a door**...
using only one hand

A door **or** ...

Temporary fixation...

Name of end users
or patients
(hospital)

Name, Logo of
company,

Danger !

Hot !

Modified each day...

N° of the building,
address, menu, ...

Temporary fixation ...

Or

Temporary fixation

Or a simple solution
easy to remove, easy to clean...

Temporary storage ...

Ozone cupboard

Temporary holding...

A way to avoid hot handle

LID WITHOUT HANDLE
FLAT LID FOR COMPLETE
FILLING.
Easier to store

And a lot of other functionalities : Ex.. Security functionalities

Hot or cold

Open - Close

Limit level of water...
